

SIGMA FLEX

For rotary screw compressors and compressed air components.
A convenient alternative for your compressed air supply.

SIGMA FLEX - Maximum transparency and flexibility

The **SIGMA FLEX** operator model allows you to use new rotary screw compressor equipment and compressed air components without the need for investment costs. This provides you with maximum costing security and allows you to benefit from all of the advantages that advanced compressed air products have to offer, e.g. outstanding energy efficiency.

The model uses a demand-based billing plan: in addition to the fixed monthly leasing rate, the bill also shows the number of actual operating hours. You therefore pay only for the hours that the compressed air system actually operated.

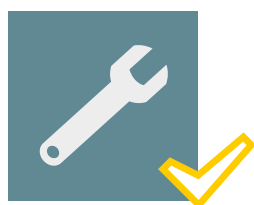

Needless to say, all service-related work is also included.

The advantages:

Maximum flexibility

The system configuration can always be adapted to your (growing) needs – even during the contract period.

Integrated service

You not only benefit from a state-of-the-art compressed air system and associated compressed air components, but also from a full service package covering servicing and maintenance.

Maximum cost transparency

Thanks to the fixed leasing rate, you can enjoy maximum planning security with no unexpected service costs.
